

## READ ME FILE FOR E-COMMERCE PROJECT

### 1. FOR BACKEND

- install STS eclipse for spring (backend side)
- then click on File → import → Maven → Existing maven project
- then after clicking on existing maven project select your backend part code folder (shoppingkart-server)
- then go to application property file in project set you port number database login id and password

#### 1.1 install MySQL work bench

- create database name of shoppingkart.
- then run the project

as the project will run tables will automatically created in shoppingkart database and the admin id password is already in code type so admin has no need to create account .

### 2. FOR FRONTEND

- Install visual studio code
- Import the frontend code folder(file → open → shoppingkart-ui folder)
- Install npm for react
- The run npm i command (it will set all dependency for project)
- The run npm start command (it will run front end)

NOTE:- ADMIN ID :- admin

ADMIN PASSWORD:- admin
